### REC\_DS using C\_Week 5\_COD\_Question 5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

In his computer science class, John is learning about Binary Search Trees (BST). He wants to build a BST and find the maximum value in the tree.

Help him by writing a program to insert nodes into a BST and find the maximum value in the tree.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of nodes in the BST.

The second line consists of N space-separated integers, representing the values of the nodes to insert into the BST.

##### ***Output Format***

The output prints the maximum value in the BST.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

10 5 15 2 7

Output: 15

### **Answer**

```
#include <stdio.h>
#include <stdlib.h>

struct TreeNode {
    int data;
    struct TreeNode* left;
    struct TreeNode* right;
};

struct TreeNode* createNode(int key) {
    struct TreeNode* newNode = (struct TreeNode*)malloc(sizeof(struct
TreeNode));
    newNode->data = key;
    newNode->left = newNode->right = NULL;
    return newNode;
}

// You are using GCC
struct TreeNode* insert(struct TreeNode* root, int key)

{

    if (root == NULL)

    {

        return createNode(key);
```

```
}  
    if (key < root->data)  
    {  
  
        root->left = insert(root->left, key);
```

```
    } else  
    {  
  
        root->right = insert(root->right, key);  
  
    }  
    return root;
```

```
int findMax(struct TreeNode* root)
```

```
{  
  
    if (root == NULL) return -1;  
    while (root->right != NULL)
```

```
{  
  
    root = root->right;
```

```
}  
    return root->data;
```

```
}  
int main() {
```

```
int N, rootValue;  
scanf("%d", &N);  
  
struct TreeNode* root = NULL;  
  
for (int i = 0; i < N; i++) {  
    int key;  
    scanf("%d", &key);  
    if (i == 0) rootValue = key;  
    root = insert(root, key);  
}  
  
int maxVal = findMax(root);  
if (maxVal != -1) {  
    printf("%d", maxVal);  
}  
  
return 0;  
}
```

**Status :** Correct

**Marks : 10/10**
